

Download the GuitarSet via [this URL](https://zenodo.org/records/3371780) (https://zenodo.org/records/3371780). You will want to download the 'annotations.zip' file and the 'audio_mono-mic.zip' file.

Extract the zip files, they should be in folders that are named the same as the zip files are, in subdirectories within the same folder as the 'project-slicer-fixed.ipynb' notebook.

Next, open the 'project-slicer-fixed.ipynb' notebook and execute all cells. This should output the sliced data in 128ms windows. The output will be in a folder called 'ei_dataset' in the same directory as the notebook, with a training and testing split.

Now you can move on to the other notebook and begin to train and test the model.
